

Nexacro is a mobile and web application development platform with a single code base and a comprehensive IDE. Nexacro dramatically increases developer productivity by supporting multiple platforms from common source code and by providing WYSIWYG screen design capability and drag-and-drop automation of most common tasks.

With the ability to create HTML5, hybrid and native applications, Nexacro provides flexibility to your development efforts so that you can take advantage of the portability of HTML5 or the deeper hardware integration and higher performance afforded by hybrid and native approaches.

Nexacro empowers your development team by allowing you to build mobile and web applications for multiple platforms from a single code base. Nexacro’s approach minimizes the effort required to support the full range of devices in your user population and enables easy integration with your existing enterprise applications and data repositories so that you can focus on what’s most important – delivering for your users.

SINGLE CODE BASE

Nexacro empowers your development team by allowing you to build mobile and web applications for multiple platforms from a single code base.

Nexacro’s approach minimizes the effort required to support the full range of devices in your user population and enables easy integration with your existing enterprise applications and data repositories so that you can focus on what’s most important – delivering for your users.

MULTI-LAYOUT MANAGER

MLM provides a WYSIWYG tool that allows screens of different dimensions and resolutions to be created rapidly by reusing screen elements.

Screen elements can be resized, rearranged or hidden based on the desired appearance and functionality for a particular screen size.

Nexacro enables better adaptation of the interface to users’ devices, Drag-and-drop reuse of interface components and Improved usability

DATA INTEGRATION

Nexacro provides a variety of tools and techniques for connecting data in existing enterprise data stores to mobile applications.

Nexacro supports easy two-way data binding - allowing developers to quickly integrate the application interface with data. Data binding provides a simple way to associate form fields and controls with data – accelerating development by simplifying data retrieval and update.

ABOUT NEXAWEB

Nexaweb provides software and services for the development of enterprise-class mobile, tablet, and web applications. Nexaweb was founded in 2000, offering tools and expertise to develop web and, later, mobile applications for the enterprise. Today, Nexaweb has more than 2,200 customers around the world across a range of industries.
